

New Haven Elementary  
Energy Team

# STRAIGHT TO THE SOURCE

Teacher Advisor:  
Susan Anderson

Planting our garden began with weeding the area and building the beds. Our goal for the project was to have a bed for each grade level to plant a variety of flowers and vegetables.

Time to assemble the beds and get them ready for planting. Students learned about plant life cycles, the structure and function of plants as well as energy flow starting with the sun!

One down... five more to go! This needs a different type of energy!

Seeds were planted and students patiently waited for them to sprout. With the new garden, all grade levels are learning about the energy flow from the sun's radiant energy to chemical energy through photosynthesis to stored energy from food.  
Where will the energy go next...
