

Bernheim Middle School

Don't Be Like Them

Advisor: Chantel Johnston

Students: 9

Our team decided that we wanted to make our school more aware of how to save energy by showing them what not to do. The students wanted to make sure that everyone knew what they shouldn't do and what they need to do in order to save energy in our school building.

This was the focus of our energy team project for the 2023-2024 school year.

Energy Team Activities

This is my first year as an Energy Team advisor, so the students have done most of this on their own while I learned from them and the former advisor.

We began by setting our goals. We wanted to show students how to save energy by showing them what they should be doing and shouldn't be doing.

We met as a team once a month, discussed steps for our project, did our energy walkthroughs, and reported what we needed to work on as a team for our school to save energy.

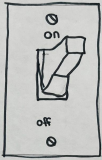

Our first task was to create our energy saving posters. Each team member created a poster and then the rest of the student body voted on their favorite to turn into the district. However, we used the other posters in our building to help create awareness.

Our final task was to create a video where the students said what you should do to save energy while showing what you shouldn't do. This video was shown in science classes to all students on how to save energy.

For A Better
TOMORROW
Save Energy
TODAY

Save Earth!

Some ways of saving Earth are:

Recycle!

Turn lights
off!

Ride bikes instead
of driving cars!

By doing at least one of these actions you can help save life on Earth!

The more
POSITIVE
energy you
throw into
the universe,
the more
POSITIVE
energy it gives
back.
